

hello; The freeze on two way mmbs will cripple my company and preclude 50% of the population in our service area from having access to high speed internet. This is needed for the economic and social growth of our area. To freeze and study the mmbs situation in larger populated areas where alternate services are available may be prudent, but rural residents will suffer because of this blanket policy and be left with only one supplier if any, thus eliminating competitive pricing.

Sincerely

Douglas J Dietz
